

Leadership readiness guide

Use this during the 45-minute setup conversation so the teacher lab is concrete, safe, and finishable before anyone enters the room.

THE DECISION

Name one exact AI product and staff account for the lab. If the school has not selected one, pause and hold a separate readiness conversation.

What leadership confirms

- ☐ Exact AI product, staff account type, and login path
- ☐ Current staff-use and data-handling guidance
- ☐ Whether file upload, sharing, browsing, connectors, and memory are allowed
- ☐ A school contact for policy or platform questions
- ☐ 8–20 participants with working accounts and laptops
- ☐ Internet, display, accessibility, and technology support
- ☐ Results will not evaluate individual teachers

The introductory boundary

Teachers use practice copy with no real people or records. Replacing names with Student A, initials, group labels, or key IDs does not automatically make information safe.

Who decides what

Andrew	Demonstrates the workflow, teaches the method, leads practice, and keeps human review visible.
School leadership	Selects the tool and account, owns local policy and permissions, and identifies the escalation contact.
Teachers	Choose a bounded task, protect information, review every result, and make final decisions.
Qualified specialists	Handle privacy, legal, security, special-education, labor, procurement, and regulated questions.

Technology fallback

Andrew can demonstrate offline and teachers can complete the paper setup if access fails. The product is not complete until the setup is saved and tested in the permitted account.

Leadership follow-up

Leadership receives cohort-level counts and medians, not participant names, task content, or identifiable comments.
