

Run one 90-minute lab that ends with a working blueprint.

Lead with workload, not AI features. Show the finished artifact first. Keep every safety rule visible in the artifact itself.

practice and save

OPENING LINE

You are not here to master AI. You are here to stop rebuilding one piece of work.

TIME	MOVE	FACILITATOR JOB
0-10	Name the time drain	Show the completed Reuse Planner. Participants write: I keep rebuilding...
10-25	Protect the inputs	Name the approved environment. Use the green, yellow, and red cards. Every participant writes approved and prohibited inputs.
25-40	Choose and bound	Apply four filters: repeatable, student-neutral, reviewable, bounded. Narrow or reroute any task that fails.
40-65	Build the blueprint	Define role, sources, output, quality, refusal, and human decision. Use plain language, not prompt jargon.
65-80	Test and review	Use the fictional practice pack. Review accuracy, bias, appropriateness, and alignment. Revise once.
80-90	Save and measure	Save the instructions, test, review routine, and two-week measurement log.

The six-field build

Role

What single job does the assistant perform?

Sources

What blank, public, fictional, educator-owned, or approved neutral sources may it use?

Output

What exact structure should it return?

Quality

What makes the draft useful and easy to review?

Refusal

What must make it stop and ask for a safer source?

Human decision

What professional decision remains with the educator?

Common moments

I do not know anything about AI.

That is fine. You need one task and your professional judgment. The structure does the rest.

Can I paste student work if I remove the name?

Not in this workshop. Names are only one identifier, and local rules may be stricter. Use the fictional pack and ask the privacy lead about the real workflow.

Can it grade for me?

It can help build a rubric or neutral feedback framework. Student-level evaluation and every final score stay with the educator.

The approved tool is unavailable.

Switch to paper/demo mode. Complete the blueprint and rehearsal. Do not create a workaround account.

Two-week follow-up

- + 0-5: anonymous pulse and wins.
- + 5-15: compare before/after minutes and correction work.
- + 15-23: diagnose common failure patterns.
- + 23-28: each educator chooses keep, revise, or stop.
- + 28-30: name unanswered policy or support needs for leadership.

CLOSE

The assistant drafts. You decide. If it takes longer to correct than to do yourself, revise it or stop using it.
