

Create the approved environment before teachers build.

A 45-minute decision guide for one lower-risk, school-aligned teacher cohort. This does not replace school policy, privacy review, or legal advice.

45 min setup conversation	5 decisions to make	0 student records needed
---	---	--

FALLBACK

If the approved environment is unclear, the lab runs in paper/demo mode with fictional material. Teachers do not create workaround accounts.

1. Name the approved environment

Record the exact tool, account type, and access route teachers may use.

Approved tool and version

Approved account or sign-in

Age or role restrictions

Data-processing restrictions

Where staff confirm approval

Leader who owns the answer

2. Set the input lanes

+ GREEN: blank templates, fictional examples, public information, teacher-written material, and approved student-neutral sources.

+ YELLOW: internal documents, high-stakes translations, personnel notes, regulated decisions, copyrighted material without clear reuse rights, or combinations of details that may identify someone.

+ RED: student records, direct or indirect identifiers, identifiable student work, grades, rosters, behavior, health, disability, counseling, family, or confidential staff information.

3. Confirm the human decision line

- + The assistant may draft, organize, reformat, summarize neutral material, or propose options.
- + It does not grade, score, rank, diagnose, recommend discipline, determine accommodations, write an IEP, make placement decisions, send communications, or replace required professional review.

4. Select the cohort

- + Recommended size: 8-20 educators.
- + Prefer a shared planning context or grade band where possible.
- + Invite one participating leader who can answer local questions.
- + Do not use the session to evaluate teacher performance.

5. Choose first-build lanes

- + Reuse Planner: approved lessons, directions, unit structures, and checklists.
- + Family Message Drafter: neutral logistics and general updates only.
- + Meeting-to-Action Assistant: neutral or properly de-identified agendas and notes.
- + Teaching Library Organizer: educator-owned, student-neutral resources.
- + Feedback Framework Builder: rubrics and neutral stems, never student scoring.

Day-of readiness

- [] The approved environment and account are named on the opening slide.
- [] Teachers can sign in before the lab begins.
- [] The school's use and privacy guidance is available.
- [] The escalation contact is named.
- [] The fictional practice pack is distributed.
- [] Teachers understand that no student records are needed.
- [] A leader will participate or remain reachable.

FOLLOW-UP

Use cohort-level counts only: tested assistants, keep/revise/stop choices, time and correction patterns, safety slips, and next support. Do not use workshop data for teacher evaluation.
