

Give teachers time back without giving them another technology to figure out.

Bring one recurring task. In a guided, beginner-friendly lab, each teacher builds one safe assistant blueprint inside the school's approved environment and leaves knowing how to test, review, and reuse it.

90 min hands-on teacher lab	8-20 educators per cohort	\$1,500 founding pilot rate
LOW ENTRY No AI experience. No coding. No student records. One task only. The teacher reviews every result.		

What every teacher leaves with

One-task brief A bounded job, named inputs, exact output, and success criteria.	Copy-ready instructions Role, sources, output, refusal rule, and human decision line.
Fictional test A safe practice source plus an expected correction challenge.	Two-week decision Minutes, corrections, usefulness, safety slips, and keep/revise/stop.

Included

45-minute leadership setup + 90-minute teacher build lab + participant toolkit + 30-minute virtual follow-up two weeks later. NYC in-person or live virtual delivery. A second same-day cohort is \$750.

The boundary

The assistant may draft and organize. It does not grade, evaluate students, make regulated decisions, or process student records. School leadership owns tool approval and policy. Teachers retain every instructional and final-use decision.
