

One task. One assistant. One safe test.

You do not need AI experience, coding, or student records. Use this workbook to build a small assistant you can test and improve.

1 recurring task	4 review checks	2 weeks measure before deciding
----------------------------	---------------------------	---

IMPORTANT

Use only the school-approved environment. If that is unclear, stay in paper/demo mode and ask leadership.

1. Name the time drain

I keep rebuilding, rewriting, reorganizing, or reformatting

It happens approximately this often

It usually takes this many minutes

I want the time back for

2. Run the first-task filters

- [] Repeatable: this happens often.
- [] Student-neutral: it can work without student records.
- [] Reviewable: I can quickly judge the result.
- [] Bounded: I can describe the job in one sentence.

IF A BOX IS EMPTY

Narrow the task or choose another. A smaller first assistant is more likely to be useful and safe.

3. Check the environment

School-approved tool

Approved account or sign-in

Where I check local guidance

Who I ask when unsure

4. Protect the inputs

My approved inputs

Blank, public, fictional, educator-owned, or approved neutral source

Blank, public, fictional, educator-owned, or approved neutral source

Blank, public, fictional, educator-owned, or approved neutral source

My pause-and-ask inputs

Input that needs a local answer

Input that needs a local answer

My never-enter inputs

Student, staff, or confidential information

Student, staff, or confidential information

Student, staff, or confidential information

5. Build the assistant

Assistant name

One-sentence job

Role

Approved sources

Exact output

Quality criteria

Refusal rule

Human decision line

6. Copy-ready instruction frame

COPY AND COMPLETE

You are my [ROLE]. Your only job is to [ONE BOUNDED TASK].

Use only [APPROVED SOURCES]. Do not assume facts that are not present. Return [EXACT OUTPUT AND FORMAT]. Make the draft [QUALITY CRITERIA].

If the request appears to contain student or confidential information, stop and ask for blank, fictional, public, or student-neutral replacement material and direct me to school guidance.

You may draft and organize. I make every instructional, evaluative, communication, and final-use decision. End with: Teacher review required: check accuracy, bias, appropriateness, and alignment before use.

7. Test with fictional material

Practice source used

What worked

What was missing or invented

One instruction I changed

8. Review every output

- ☐ Accuracy: facts, assumptions, omissions, and invented details.
- ☐ Bias: whose context, language, and perspective are treated as default.
- ☐ Appropriateness: tone, level, accessibility, and format.
- ☐ Alignment: task, school guidance, and professional goal.

My decision

- ☐ Use after editing
- ☐ Revise the assistant
- ☐ Stop

9. Two-week measurement

Date	Task	Before	With AI	Corrections	Useful?	Slip?	Decision

DECISION RULE

Keep it if it is useful, faster including corrections, safe, and easy to explain. Revise it if the job or output is unclear. Stop if correction work cancels the benefit or the safety boundary is unstable.
